FUTURE SOLUTIONS NOW

E-SECURITY (CCTV)

HOW SECURE IS YOUR HOME/OFFICE?

HOW YOU KEEP VIGILANCE AROUND?

As the world becomes less safe, businesses, institutions and individuals with valuable assets need to take precautions to protect themselves and their property. In many instances, modern digital CCTV is the best answer to crime detection and prevention.

CCTV cameras are springing up all over the place. It is widely regarded that, on an average day, you are captured on CCTV up to 300 times. One of the reasons for the increased implementation of CCTV is its deterrent ability. A survey conducted back in January 2006 found that over two-thirds of burglars would probably or definitely not burgle premises that had CCTV installed.

By setting up a network of CCTV cameras on your premises, many locations can be viewed from a single monitor, thus decreasing your need for expensive manned guarding or "stop and search" checks.

Even the simple physical presence of CCTV cameras serves to generate a feeling of safety with your customers, visitors and employees. In situations where cameras have been placed in prominent locations, unscrupulous insurance claims and assaults on members of staff dealing with the public have been vastly reduced.

E-SECURITY (INTRUSION ALARM)

WHY ELECTRONIC SECURITY?

Crime Rate on the rise

There is a constant rise in the number of burglaries, robberies and The constant rise in crime rate coupled with increasing customer awareness lead to a huge increase in demand for security systems.

Urbanization and Real Estate Growth

It is becoming a standard feature to install electronic security systems and video door phones in apartments and group housing complexes. New and upcoming construction of all sizes, millions of existing residential, commercial and industrial buildings are also in need of electronic security systems.

Increasing cost of hiring Security Guards

Hiring a security guard is an expensive affair and professional manned security companies are charging anywhere between Rs.5000/- to Rs.7500/- per month for an eight hour shift. Minimum wage rates will continue to increase in line with the increased in cost of living and hiring security guard is only going to become more expensive. With the cost of hiring just one security guard round the clock exceeding 1.5 lacs a year, many in need of security are looking at alternatives to manned security that do not involve a recurring cost, hence a huge increase in demand for electronic security systems.

SAFEGUARD YOUR VALUABLES EVEN WHEN YOU ARE AWAY.

1. GET ALERTED IF ANYONE TRIES TO TRESSPASS YOUR PREMISES WHEN SECURITY SYSTEM IS ENABLED.
2. GET ALERT ON MOBILE ON SECURITY THREAT EVEN WHEN AWAY FROM HOME (OPTIONAL).

2. Website Development; Online Promotion; Domain Registration; Email solutions.

WHY I NEED WEBSITE

1. **Websites Never Sleep.** A website will allow your business or organization to be open 24 hours a day, 7 days a week, and 365 days a year. Having a website is the equivalent of having an employee working around the clock - even weekends and holidays!
2. **Your Top Competitor Has A Website.** If you are in direct competition with another business that has a website, they have a clear advantage - especially if they are adequately marketing their website. A website is a great way to level the playing field.
3. **"Just Google It".** More than ever before, people are turning away from traditional means of finding information and looking online, especially by way of mobile devices. Your business should be at their fingertips when they look in the search engines.
4. **Websites Improve Customer Confidence & Corporate Image.** With a professional website, you will improve your overall impression to the public and, in turn, your customers will develop a greater sense of confidence in your organization.
5. **Small Businesses Have Higher Revenue.** According to the Small Business Administration, small businesses that have websites are averaging more in sales than small businesses not online.
6. **Do You Know 247 Million People?** Worldwide Internet usage is pushing two billion.
7. **Websites Help Establish More Customers.** According to the Small Business Administration, 50% of Internet sales are from new customers. Having a website significantly improves your customer reach no matter what services or products you offer.
8. **Websites Are Not Just Local, They Are Global.** Most small businesses are only able to market to their town and surrounding communities. With a website, you can take your goods and services across India and around the world, if you so choose.

Every Business has unique requirement. We develop websites optimized for your business needs.

Even after going online we offer regular updates and necessary services.
